The **Formtek Auditing Extension** for Alfresco provides complete audit summaries of actions performed on documents, folders, and other types of content stored in an Alfresco repository. The Auditing Extension records the action performed, the date and time the action occurred, the user who performed the action, and other configurable details on the action. Repository items maintain their own auditing information, and any user who can access the item can also view its audit log.

System Administrators can use the **Audit History tool** to granularly search the repository for audit records using a variety of search filters. In addition to document and folder audit information, the Audit History tool provides audit information on other repository content such as sites, users, groups, and different types of data lists. Additionally, administrators and workflow auditors can use the **Workflow History tool** to search for workflow records and view workflow activity.

***The latest release of the Formtek Auditing Extension (v2.5) provides additional features to address GDPR compliance requirements, and additional platform support:***

- The Users Search button now allows multi-user searches.
- A new Group Search button can be enabled via a global property for group searches.
- The Clear and Stop buttons can now be hidden via a new global property.
- When a document or folder is renamed, Save to File now records both the item's previous name along with its new name in the csv file.
- Support for Alfresco Content Services 5.2 through 7.x on Windows and Linux platforms

***Our next planned release includes the ability to audit actions performed in Alfresco Digital Workspace (ADW) and Alfresco Content Application (ACA).***
